R.A.P.T. - 4/25/83 - 4/27/83 4/28/83

To: Bob Monroe

General comments based on my observations and discussions with participants and trainers are as follows;

1. Food and service were excellent. Jane, Cindy, Maggie and all involved should be commended.
2. There were only a few "light" comments regarding the shortage of bathrooms.
3. Only one woman commented on the small size of rooms off the Explorer Lounge, but it was not derogatory.
4. For future programs there should be closer communication between coordinator, technicians and conductors so that everyone is more aware of what is to be done and when.

   Bob Klaus and I both appreciate this and will undoubtedly improve on this aspect in future programs.
5. There was a shortage of juices and snacks during the evening hours. I mentioned this to Jane and will check it out in the future.
6. Bob Klaus felt that due to the highly technically oriented group he had, it might be prudent <u>not</u> to test the encoding with future similar groups. This can be discussed prior to future programs.

7. At Jean Wallis' request, I obtained a list of those interested in receiving news of future Institute activities. I think this is a good idea and a good means of obtaining activity interested people on our mailing list.
8. In view of the interest shown by this group in the theory, basics, and technology of the Hemi-Sync system, Bob Klaus hopes that as your health improves, you will be available to join the group for dinner and informal discussion and comments on some of the technical questions that arise.
9. Of this group, there were two that were interested in a future Gateway, but they both have to check with higher authority as they are both military. The following names have been given to Helen for follow up with literature:
   Col. William B. Guild, INSCOM
   Bricca P. Leonhardt (Capt.) INSCOM
10. I understand Helen has given you a copy of the preliminary evaluation sheets completed by each participant. I'm attaching a summary of these sheets in hopes that it may give us some insight for future programs.
11. In addition to the couple of comments on the sheets regarding the nutrition tape, I heard several comments to the effects of the tape on others. Generally they

did not think it was as forceful and as influential as the smoking tape. They liked the positive comments regarding the bad effects of smoking and the benefits of stopping. The nutrician tape was not as specific.
